Clinical Expertise Patient Values

Welcome Everyone! This course, Evidence-Based Practice & Quality Improvement in Health Care Systems, will provide the tools needed to increase your understanding of the connection among research, evidence-based practice, and quality improvement.

To begin this course, you should start by: watching both videos (1st-Welcome to 608 and 2nd Introduction to 608) below. Then read continue by reading the Announcements to the right of this message. After this step, I would suggest downloading a copy of the syllabus and Course Schedule which can be found on the left side bar labeled "syllabus."

Assignments are listed below the syllabus function, followed by the Lessons which provide a more in-depth overview of the course assignments. Resources will allow you to also print handouts, articles, etc. and are categorized by folders. Forums can be found next, which is where you will post questions for all class members to view, introductions and 2 discussion questions for this course. The gradebook is where you can view your course grade, but you will not be able to see any feedback on assignments; instead you will be able to view feedback to course assignments when assignments are returned to you in the Assignment tab.

Additional areas of support for Sakai, Student Disability Services and Smarthinking are directly linked by clicking on the tabs. The Roster will allow to see all course members which can also be found under the mail tool. Finally, Class climate online survey information which will not be required until closer to the end of the semester can be found on the left side bar. The help tab allows you to see common resolutions to problems you may encounter in Sakai.
